- Vastly improved maintenance
- Ease of use
- Seamless upgrades
- Enhanced and reliable alerts
- Quick and effective transition from legacy scheduler
- Reduced z/OS CPU usage

Lands End Replaced CA Legacy Job Scheduler with Stonebranch's Universal Automation Center

Leading online and catalog retailer of casual and business clothing, home goods, uniforms, and luggage transitioned to a modern workload automation solution.

"Universal Automation Center had precisely the functionality and capabilities we were looking for in a workload automation solution.

The price offered tremendous value and the in-house knowledge at Stonebranch with regards to transitioning from CA's ESP was an additional benefit."

Brian Lemanski
Mainframe Systems Programmer,
Lands' End

Background

Lands' End, Inc. (Nasdaq:LE) is a leading multi-channel retailer of clothing, accessories, footwear and home products. They offer products through catalogs, online at www.landsend.com and affiliated specialty and international websites, and through retail locations,

primarily at Lands' End Shops at Sears and standalone Lands' End Stores. They are a classic American lifestyle brand with a passion for quality, legendary service and real value, and seek to deliver timeless style for men, women, kids and the home.

Challenge

Lands' End needed to upgrade from its legacy CA Workload Automation ESP scheduler in order to comply with a company-wide strategic decision to migrate all enterprise applications off the z/OS Mainframe environment. The Lands' End scheduling team volunteered to be the

first in the company to modernize, and a robust list of system requirements was collected, reviewed and ranked. A Request for Proposal (RFP) was prepared and distributed to five vendors, including Stonebranch.

Solution

Following a thorough review of RFP responses, and an intense Proof of Concept (POC), Stonebranch's Universal Automation Center was identified as the ideal automation engine for Lands' End's post-Mainframe environment.

"Universal Automation Center had precisely the functionality and capabilities we were

Implementation went smoothly with minimal impact on Lands' End's operating environment. The transition from ESP, aided by Stonebranch's experienced transition team, was verified successfully and completed on schedule.

With Universal Automation Center, the key benefits reaped by Lands' End were ease of use, improved maintenance, and the ability to mass update without affecting active servers.

"We are no longer dependent on messages to the z/OS master console, or subject to them being deleted accidentally or disappearing because the console was set to roll/delete," said Lemanski. "The custom dashboard facilitates correct and successful monitoring."

Lands' End can now change commands or parameters in a waiting or failed task instance. This was not possible previously. They can also fail over to the passive controller instantly.

looking for in a workload automation solution," says Lands' End Mainframe Systems Programmer, Brian Lemanski.

"The price offered tremendous value and the in-house knowledge at Stonebranch with regards to transitioning from ESP was an additional benefit."

When the z/OS LPARs are IPLed, distributed workload continues to process. Automatic restarts are easier to code, and it's effortless to identify if a task is defined to restart automatically. None of his functionality was available in their previous job scheduler.

Furthermore, Lands' End reduced z/OS CPU usage by approximately 19 hours a month by moving their scheduling manager off of their z/OS environment. This has resulted in substantial cost savings in addition to the wealth of newly gained functionality.

Most importantly, Lands' End has become a vibrant advocate in the Stonebranch community. "I would definitely recommend Stonebranch to other organizations looking to improve on automation", said Lemanski. "We are very pleased to be powered by Stonebranch."

*Return on Automation (RoA): the investment in automation and the right automation tool pays off in a short time and returns many benefits. These include higher efficiency, faster processes, greater process reliability, higher data throughput, seamless integration, and higher production. The overall result is an increase in profits.

ABOUT STONEBRANCH

Stonebranch provides modern automation solutions that simplify mission-critical IT business processes reliably and securely across complex and diverse IT environments.

Stonebranch clients include some of the world's largest financial, healthcare and technology institutions. Founded in 1999 and headquartered in Atlanta, Georgia, Stonebranch has offices throughout the world, including the US, Germany, Canada, United Kingdom, Netherlands, Greece, Spain and Sweden, and the European headquarters in Bad Homburg, Germany.
